ACCESS CONTROL

# Who is on your **ESTATE?**

# Addressing the unique needs of **ESTATES**

## Simple and scalable

Good management and security plays an important part in the decision to buy into a residential estate or complex. Linked to this is the ability to effectively manage access into the estate.

A cornerstone of any security solution is an access control system. With over 30 years' experience in the industry, Impro's systems provide integrated and scalable solutions to meet your needs both today and in the future – adding up to unrivalled cost savings.

### **Who's on site?**

The primary goal for an access control system is to define who can access areas in the estate. To simplify this task, Access Portal enables you to simply customise groups of people, for example, residents or their employees, contractors, estate employees, or guests. You can have as many custom groups as your site requires, standard out the box.

This gives you the people, but what about their associated assets, such as vehicles, or perhaps pets? When a parking violation has occurred, or a pet is found wandering, you need to quickly identify the owner. Again, easily achieved through the ability to link specific items to individuals or groups – now finding the owner of Fido is a simple click of a mouse.

### **Biometrics**

Biometrics provide an additional security layer in an estate as they can't be lent, lost or copied. Devices include fingerprint, no touch hand and facial recognition.

### **Visitor and contractor management**

Access Portal offers add-on products to manage visitors and contractors, such as visitor book to do away with the traditional paper system, Visitor Portal for a more holistic approach, as well as integrated handheld devices for scanning vehicle and drivers licenses, or handheld biometric devices.

The system is also compatible with a variety of leading systems in the market.

### **Integrating systems**

Access Portal offers an unrivalled flexibility, where other systems and products can be quickly integrated into the access control. This could be visitor and contractor management products, video management and CCTV systems, or intrusion alarms.

### **Communal facilities**

Many estates have communal facilities which can be booked or rented out. In such

instances, Access Portal is able to limit users to the authorized people for that period, for example the squash courts, or a party at the clubhouse. In the case of damage to shared facilities, Access Portal is also able to report on who was using the facility at that time.

#### **Access zones**

Access Portal enables the creation of zones, to ring fence certain areas of large estates. This enables an estate to limit access into a particular zone, but not the overall estate – resulting in reduced risk and, in the case of an emergency, the ability to lockdown specific zones without inconveniencing the entire estate.

#### **Mobile phones are the new “key”**

We’re all very aware of where our cellphone is and the device has become a part of everyday life. Within access control mobile phones provide a new level of convenience. Residents are able to use their cellphone and virtual credentials to enter the estate, in place of the traditional tag.

Estate and security managers can also manage the site through their mobile phone – giving true 24/7 access no matter where you are.

#### **Streamlining vehicles**

Most estates face the challenge of vehicle lanes becoming clogged, especially when a few vehicles arrive at the same time. Technology can reduce this problem, with the use of ANPR (automatic number plate recognition) as the boom automatically opens for registered vehicles; no stopping to present a tag. Dual tags can also be used for enhanced protection, where the driver and vehicle tags must be identified before the boom will open.

#### **Futureproof technology**

Access control is a significant investment for any estate. With Access Portal your investment is secured into the future, as new releases incorporate additional features or products with a quick and easy update.

#### **Proudly South African**

Impro’s solutions are proudly home-grown. We design, manufacture and ship our solutions from Durban in South Africa. By supporting Impro, you’re supporting the country and creating positive economic impacts and job opportunities.

### **COMPLETE SOLUTION FOR YOUR ACCESS CONTROL NEEDS**

- **Software** that is easy to use and can be customised to your unique needs, straight off the shelf
- **Hardware** providing true plug and play functionality, with offline functionality
- **Credentials** in various forms such as tag, keyfob, card, remote or virtual (mobile phone)
- **Support** available 24-hours a day
- **Training** available at our dedicated training centres, or on site at your estate
- **Client services** for project specification and guidance
- **No quibble** warranty in South Africa
