

Milestone INTEGRATION

- **Convenience:** manage your site through a single interface
- **Security:** react to situations as they happen
- **Investigations:** quicker and easier with integrated indexing

Integrated **VMS** (Video Management System)

WHO SHOULD USE THE MILESTONE INTEGRATION?

Those looking for enhanced security by adding a visibility component to their access control, to further verify users' identity and authorisation.

Also ideal for:

- Users with separate Milestone and Access Portal installations
- Those wanting to upgrade a legacy VMS and/or access control system
- Users with a camera system but no access control, and vice versa

PRODUCT FEATURES:

- Search credential holders
- View live activities on the dashboard
- See the status of doors
- Unlock doors
- View events and alarm

The integration of Access Portal with Milestone's VMS brings a new level of convenience for your security management.

The biggest benefit is the ability to view both the VMS and access control systems in a single interface - taking live monitoring to a new level of control and, more importantly, a rapid reaction to potential issues.

Live monitoring

The indexing of access control events, allows the operator to quickly access the relevant footage. This could be used for:

- lockdown scenario's to visually ensure areas are locked down, or opened, depending on the situation
- preventing attempts to bypass the access control system by tailgating
- enhanced verification by comparing the credential image on file, with the camera view

Map view

Events pop up on the map view, providing an overview of activities on site and the location of issues - further

enhancing visibility and the speed of response.

Investigation analysis

The integration of both systems provides for an easier post-incident investigation, through the ability to quickly find indexed and relevant footage.

Workflow management

The ability to manage and respond to events is simpler, as operators are able to identify and deploy personnel directly to the problem area.

Further, overall monitoring is improved as multiple locations can be viewed at any time - enabling operators to cover greater areas than a single guard on the ground.

Training

Operator training is simplified, with the users only needing to learn one core interface.

Compatibility

The integration is available from Access Portal 4.2 across the Milestone XProtect 2020 R2 tiers.
