

Access Portal 4.0

The core focus of the Access Portal 4.0 release is the General Data Protection Regulation (GDPR) to further assist customers in ensuring their compliance to this regulation.

New **hardware** integrations

USER EXPERIENCE

In addition to ongoing cosmetic changes, we've made additional enhancements to the user experience to ensure Access Portal continues to be the simplest and most user-friendly software on the market.

In this release, you'll find contextual help built directly in the software, for commonly used functions – giving you guidance at the click of a button.

We've also enhanced the simplicity of accessing and interpreting common reports.

GDPR enhancements

We've introduced the ability to delete tagholders and/or the associated transactions. In line with GDPR, a key requirement is the ability for an individual to be "forgotten". This new feature gives an Admin user the option to delete the tagholder, the tagholder and transactions, or just transactions and, as always, Access Portal provides a full audit trail of any deletions undertaken. Access Portal also provides the option to archive this information if preferred.

Integrated hardware

A key benefit of Access Portal is our seamless integration with new access control hardware and the current release is no different. Integrated hardware includes:

- Idemia Morpho Wave Compact: a wall-mounted, frictionless biometric reader for high-traffic environments that acquires four fingers in 3D with one pass of the hand over the sensor.

- Impro biometric reader: a sleek mullion fingerprint reader, which incorporates multi-spectral imaging and the unrivalled ability to read dirty, wet, or worn fingerprints.
- Seos reader: the soon-to-be-released Impro mullion reader that incorporates the world-leading Seos technology, for best-in-class security and the adoption of Mobile Access and virtual credentials.

New widgets

The customizable dashboard with its array of widgets continues to be a popular feature, and we've added two new widgets. You're now able to see the last ten transactions of a tagholder (last 10 widget), and with the Find Image widget, you simply enter an ID number to view the tagholders' photo to verify their access – a quick and easy way to verify someone who's perhaps forgotten their credential.

Specifications

ACCESS PORTAL SOFTWARE

	Access Portal LITE	Access Portal BASIC	Access Portal PRO	Access Portal ENTERPRISE
Number of sites	1	1	25	1,000
Doors				
Doors per site	16	100	200	500
